

The wait is over, East Bernard. Frontier Fiber Internet is coming to your neighborhood! Access to high-speed internet is critical to everyone. Frontier is expanding the reach of its fiber-optic network so homes and businesses can benefit from Frontier's mission to Build Gigabit America. Frontier is the 2<sup>nd</sup> largest builder of fiber-optic networks in the nation with more than 180,000 miles of advanced fiber network.

Using a network of hair-thin glass fiber cables and laser lights, Frontier now offers internet service as fast as 7 gigabits\* per second. This allows consumers to upload and download videos, files and streaming entertainment services more than 50 times faster than the broadband service offered by cable companies in Texas.

That means more people in the same household can enjoy great speeds at the same time, while working from home, enjoying home schooling, streaming video programming, or just surfing the web. And once Frontier builds this advanced network in our community, they can provide even faster broadband speeds in the future just by upgrading the technology in their local switching centers.

You'll notice a lot of activity in our community. Before Frontier brings fiber to your neighborhoods, they will:

- Secure any required permits;
- Locate other utilities to avoid impacting existing facilities;
- Create a path for their network and set up connection points to bring fiber to customers; and
- Conduct technical and engineering work in their central office facilities and on the network itself.

If you are interested in knowing if your address qualifies for Frontier® FiberOptic service, contact 1.877.313.2036 (residential), 1.844.931.2538 (business), or visit <https://www.getfrontierfiber.com/> for more information.

- A gigabit is 1,000 megabits per second, so 7 gigabits would be 7,000 megabits.
